Commit:

<https://github.com/JohanAnderssonOstling/PKDProjekt/commit/86c57065b85b92ccd2ee0f7b004fbc521c5b18ee>

Added a server that for each accepted client starts a thread that handles the communication with the client. Added a client that connects to the server and then receives a message from the server, sends a message to the server and then receives said message echoed. Current server-client communication is only intended to test that the communication is functioning.
